Continuation of 5, does NOT place the application in condition for allowance because: Applicant's arguments include the following:

- A) Stucka fails to teach extracting a first data from a display buffer.
- B) It is not reasonable to combine Stucka with Brittain.
- C) Stucka fails to teach recognizing a layout.

Examiner disagrees:

- A) Stucka teaches extracting first data from a display buffer as indicated in figure 2, where in the display buffer of the system is located in RAM. He further teaches retrieving the display objects from the RAM (col. 8, lines 16-26)
- B) It is reasonable to combine Stucka with Brittain, because as indicate in Brittain that by placing video buffer in a graphic card the graphic displaying speed will be boot, which is essential for a server that provides for the dynamic sharing of portions of user interfaces. C) Stucka teaches recognizing a layout (col. 24, lines 58-61). Examiner interprets back ground, foreground, color, text, font to be a layout of an interface. .
